AIX

climbing holds & volumes catalogue

2017

ABOUT AIX

In 1996 climber Andrej Chrastina started experimenting with creating new climbing holds from a mixture of epoxy resin and sand. Then after many attempts he developed how best to make the shapes, molds, and final holds. Thus was born a new brand of climbing holds under the trademark “a.9”.
Since 2003 the trademark has been changed to “AIX”, and new holds have been produced on the basis of polyester resins.

To continue their progress and the development of new materials and technologies in the production of climbing holds, the AIX Company chose to cooperate with the best experts in their field worldwide. This decision enabled AIX’s use of the newest materials and methods for the production of their climbing holds. The transition to the new production process was completed at the end of 2013.

Since then all AIX holds have met the highest standards and requirements put on these types of products. Some of the most important requirements are the strength of the materials used and the colorfastness against water, temperature, and UV radiation.

With the new production of AIX holds, each hold is marked with a unique production tracking ID number.

Now, most AIX holds are made from a polyester composite, excluding those “huge AIX holds” which already since 2010 are made from polyurethane with Hollow Back technology (Elements AIX Popcorn and AIX Turtle).

Solid holds from polyurethane are common in North America and have also become more popular in Europe in recent years. For this reason we also offer some AIX holds made from polyurethane, and expect this offer to be increased.

TECHNICAL INFORMATIONS

AIX “SECURE SYSTEM”

All AIX holds from the size S up incorporate our AIX Secure system.

This includes a metal spring under the washer inside the hold around the bolt-hole. This spring ensures that the majority of the hold will remain on the bolt on the wall, if the hold were to break due to incorrectly use or mounting.

AIX “DUAL WASHER”

All AIX bolt-on holds incorporate a Dual Washer. This metallic insert allows the use of both type of bolts – cap head and countersunk bolts. The net effect of this Dual Washer is exceptional stress distribution within the body of the hold, thus increasing the force required to break the hold through the mounting bolt, and ultimately resulting in a hold that is stronger and more secure.

AIX “HOLLOW-BACK TECHNOLOGY”

We use our Hollow-back Technology for all of AIX’s big holds – all holds whose volume is more than 1.5 liters. This technology saves material and also reduces the overall weight of the hold, without the limiting safety or hold durability.

For AIX hold with a volume of more than 3 liters, the holds are constructed of a polyurethane resin.

COLORS

We offer AIX holds in 10 standard and 4 fluorescent colors. Each of these colors is available for both materials the holds are made from – polyester and polyurethane.

We can offer additional custom colors upon request.

AIX holds made from polyester can also be produced by adding multi-color dyes for more variations – 2-3 color layers, 2-3 color swirls, spots, or custom design.

STANDARD COLORS

- white
- gray
- black
- blue
- orange
- yellow
- purple
- red
- green
- salmon

UV STABILITY OF COLORS

10 standard colors are UV stable and can be used outside.

Fluorescent colors have specific properties that fade when exposed to UV radiation. By this reason we strictly do not recommend using holds made from these colors outdoors.

Polyurethane holds – the intrinsic properties of the polyurethane material lead to a gradual change of the color towards a brown shade. This change occurs more quickly under direct sunlight!

SIZES

- mini
- XS
- S
- M
- L
- XL
- XXL
- XTR
- element

ID NUMBERS

Each AIX hold has a unique identification number. This number is in the circle and is placed on the surface of the hold. The AIX ID enables a quick and positive identification of every single AIX hold.

BOLTS & SCREWS

For attaching bolt-on holds to T-nuts, we recommend using M10 cap head or countersunk Allen head bolts of appropriate length.

For screw-on holds, use 5 mm self-driving flathead wood screws.
